

IBM

AI/ML WITH PROMPT ENGINEERING

ABOUT IBM

A global technology leader, **IBM** has pioneered innovations for over a century. With a decades-long rich history of academic collaboration, IBM brings unparalleled industry expertise, cutting-edge research, and a deep commitment to fostering future-ready talent. IBM's vast resources and industry insights form the bedrock of this transformative educational program.

The mission of **IBM** is to be a catalyst that makes the world work better. We aim to have a positive impact globally, and in the communities where we operate, through business ethics, environmental commitment and responsible technology.

IBM ICE

(Innovation Centre for Education)

Launched by IBM in 2010, the Innovation Centre for Education (IBM ICE) is a transformative initiative bridging the gap between academia and industry. IBM ICE programs equip students with cutting-edge, industry-aligned skills in high-demand technology domains. Emphasizing hands-on, project-based learning and adherence to NEP norms, IBM ICE cultivates future-ready professionals prepared for the dynamic job market.

TRANSNEURON

As IBM's premium Business & Delivery Partner for the IBM ICE programs, Trans Neuron Technologies (TNT) brings over a decade of specialized expertise in the Skill & Education sector. TNT empowers academic institutions across India and Southeast Asia with industry-relevant training, leveraging innovative platforms (including AI-powered solutions) and a proven track record, recognized by its Harvard case study. TNT ensures seamless program delivery and impactful learning outcomes.

WHO ARE WE?

Edovu Ventures is a pioneer in shaping the educational landscape, providing world-class learning experiences to the students. After a successful journey in school education, Edovu Ventures is embarking on a new venture in higher education under the name eduXLL.

At eduXLL, we are redefining the boundaries of online education by offering a platform where ambition meets opportunity. Born from a vision to make high-quality education accessible to all, eduXLL bridges the gap between learners and their aspirations through a meticulously curated catalog of online programs. Our mission is to empower individuals around the globe by providing them with the tools, knowledge, and skills they need to excel in their careers and personal development.

PROGRAM INTRODUCTION

The rise of **Generative AI and Foundation Models** (e.g., ChatGPT, Claude, Gemini) has created a new frontier in every industry. This isn't just another technology; it's a new kind of collaborator. The most successful professionals will be those who can direct this powerful intelligence with precision and purpose. The key to unlocking this potential is not found in code, but in communication.

This is where **prompt engineering** becomes the essential skill of our time. Just as **Vygotsky emphasized the Zone of Proximal Development (ZPD)** to show how expert guidance can elevate a learner's ability, our program teaches you to act as that expert guide for AI. By scaffolding complex tasks into clear instructions, you can unlock capabilities that were once out of reach. By mastering this cognitive bridge between human intent and machine output, **this certificate program empowers learners to engage AI systems intelligently, ethically, and creatively**, turning abstract potential into concrete professional advantages.

PROGRAM OBJECTIVES

By the end of this course, students will be able to:

1. Understand the fundamentals of artificial intelligence and machine learning from a human-centered, application-oriented perspective.
2. Design and refine prompts that interact with AI systems for tasks such as summarization, problem-solving, creative writing, analysis, and more.
3. Compare how different AI models respond to prompts and identify effective communication patterns.
4. Critically evaluate the ethical, social, and epistemological dimensions of using AI tools (e.g., hallucination, bias, misinformation).
5. Co-create AI-augmented outputs—across academic, professional, and creative contexts—by iteratively improving prompt strategies.

WHO IS THIS PROGRAM FOR?

- Working professionals with a willingness to explore, iterate, and reflect critically
- Technical professionals can go deeper into model logic; However, all learners will focus on human-AI communication
- Educators and faculty exploring AI use in instruction and research
- Professionals and lifelong learners interested in applied AI without deep technical expertise

ELIGIBILITY

- Graduation/Diploma from any recognized university or institution.
- No programming or Coding knowledge required

IBM Innovation Centre for Education

KEY SKILLS GAINED

THIS PROGRAM BUILDS THE FOLLOWING
TECHNICAL AND ANALYTICAL SKILLS

PROMPT ENGINEERING

- Writing effective prompts for a variety of AI/ML models
- Using structured prompting techniques: zero-shot, one-shot, few-shot, chain-of-thought
- Adapting prompts for tasks such as summarization, problem-solving, classification, ideation

AI/ML Literacy (Non-Coding)

- Understanding foundational concepts: training data, model bias, large language models (LLMs)
- Recognizing how AI systems interpret language and generate outputs
- Distinguishing between different types of AI tools (LLMs, image generators, chatbots, etc.)

Critical Thinking About AI

- Identifying limitations of AI (e.g., hallucinations, false confidence, ethical dilemmas)
- Evaluating sources, reliability, and fairness in AI outputs
- Recognizing human responsibility in prompt design and decision-making

Collaborative & Creative Problem-Solving

- Using AI as a co-pilot in writing, designing, analyzing, and decision-making
- Co-creating with others in teams using shared prompt strategies
- Applying AI tools across diverse fields: education, business, design, research, media

Ethical and Reflective AI Use

- Awareness of ethical implications: surveillance, plagiarism, bias, misinformation
- Developing digital literacy and responsible AI usage habits
- Practicing transparency and traceability in AI-influenced work

KEY ACTIVITIES & METHODS

- Prompt workshops using tools like ChatGPT, Claude, Gemini
- Group projects on human-AI collaboration
- Ethical debates on prompt misuse and bias
- Reverse engineering AI responses to understand model behaviour
- Cross-disciplinary case studies: Education, Health, Media, Governance, Art, etc.

TOOLS AND PLATFORMS

A well-rounded AI/ML with Prompt Engineering certification will enable learners hands-on experience with leading industry tools.

Here's a curated list of software, platforms, and lab environments used in AI/ML and Prompt Engineering:

Python (Anaconda, Jupyter Notebooks)

- Foundation for ML modeling, data preprocessing, and experimentation.
- Libraries: NumPy, pandas, matplotlib, scikit-learn.

Hugging Face Transformers

- For fine-tuning, prompting, and deploying transformer based language models like BERT, GPT-2/3/4.
- Hugging Face Hub offers model sharing and datasets.

OpenAI API / Playground

- Practice prompt engineering using GPT-4 and Codex models.
- Allows few-shot, zero-shot, and chain-of-thought prompting.

Google Colab / Kaggle Notebooks

- Free, cloud-based notebooks with GPU support.
- Enables collaborative coding, model training, and data visualization.

Weights & Biases / MLflow

- Experiment tracking and model management tools.
- Important for reproducibility and hyperparameter tuning.

Prompt Engineering Tools

- LangChain: For chaining prompts and integrating LLMs into applications.
- Flowise / Dust / PromptLayer: For building and testing prompt workflows visually or via API.

AutoML Platforms

- Google Cloud Vertex AI, Amazon SageMaker, Azure ML Studio: Low-code platforms with AutoML and deployment support.

Data Platforms

- Datasets from Kaggle, UCI ML Repository, and OpenAI's API data for real-world task testing.

FEATURED CASE STUDIES

Enhancing Customer Service with Prompt Engineering at Shopify

Summary: Shopify integrated GPT-3-based virtual assistants into their helpdesk system. Using prompt tuning techniques like instruction-following and role-based prompting, they reduced average response times by 30% and improved customer satisfaction scores by 18%.

Learning Point: Illustrates chain-of-thought and role-based prompting to guide model behavior in live environments.

AI-Augmented Legal Drafting at DoNotPay

Summary: DoNotPay, a legal tech startup, used GPT-based prompting to automate drafting of appeal letters and legal documentation. Engineers used few-shot prompts combined with legal templates for high compliance and readability.

Learning Point: Demonstrates how prompt engineering can create structured, legally sound outputs in high-stakes contexts.

Personalized Learning Paths with ML at Duolingo

Summary: Duolingo deployed ML models trained on user interaction data to personalize lesson sequences. Recent upgrades use LLMs (e.g., GPT-4) to provide real-time grammar explanations through prompt chaining.

Learning Point: Highlights the blending of supervised learning and prompt engineering to adapt content dynamically for learners.

Healthcare Chatbots at Babylon Health

Summary: Babylon Health integrated GPT-style chatbots to assist in symptom checking. Prompt engineering strategies incorporated system-level instructions and confidence thresholds to ensure ethical, low-risk recommendations.

Learning Point: Focuses on responsible AI use and safety and compliance in prompt construction.

Financial Forecasting at JPMorgan Chase

Summary: JPMorgan developed an LLM tool using prompt templates to summarize financial trends and generate predictive insights from earnings reports. Engineers tuned prompts using retrieval-augmented generation (RAG).

Learning Point: Explores how prompt engineering intersects with document retrieval and business analytics.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 1: WHAT IS AI? FOUNDATIONS FOR EVERYONE

Objectives

- Introduce students to foundational AI and ML concepts in a simple, accessible way.
- Differentiate between types of AI: narrow, general, and superintelligent.
- Dispel common myths and media-fuelled misconceptions about AI.
- Explore real-world AI applications across diverse fields.
- Build baseline digital fluency in AI literacy for all disciplines.

Learning Outcomes

By the end of this module, learners will be able to:

- Describe core AI concepts and terminology (e.g., model, training data, inference).
- Recognize and classify AI systems used in daily life.
- Explain the difference between rule-based and learning-based systems.
- Identify what AI can and cannot do with current technology.

Subtopics

- The history and evolution of AI
- Types of AI: Narrow AI, General AI, and Superintelligent AI
- Machine Learning and Deep Learning in plain terms
- How AI works: data, algorithms, training, and outputs
- Myths vs realities: job displacement, robot takeovers, and sentience
- AI in daily life: from Netflix recommendations to Google Maps

Key Skills Gained

- AI/ML conceptual literacy
- Critical thinking about technology
- Analytical reasoning around systems and tools

Key Takeaways

- AI is task-specific and dependent on training data—it's not "intelligent" in a human sense.
- Understanding AI's foundations helps demystify its capabilities and risks.
- AI is already part of our daily lives—even when we don't notice.
- A clear, contextual understanding of AI supports ethical and empowered usage.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 2: PROMPT ENGINEERING – THINKING LIKE A TRANSLATOR

Objectives

- Introduce prompt engineering as a communication bridge between humans and AI.
- Explore how language models interpret and respond to input.
- Learn the elements of clear, context-rich, goal-directed prompts.
- Practice writing different styles of prompts and seeing their effects.

Learning Outcomes

Learners will be able to:

- Design simple prompts for tasks such as summarizing, answering questions, and rewriting.
- Adjust prompt clarity, tone, and specificity to improve output quality.
- Explain how models interpret tokens, instructions, and context windows.
- Reflect on their prompting habits and biases.

Subtopics

- What is a prompt? Why AI responds the way it does
- Basic principles: specificity, structure, intent
- Prompt formats: interrogative, imperative, comparative, system prompts
- AI memory and token limits: how much context matters
- Prompt examples and live practice: improving a poor prompt

Key Skills Gained

- Prompt design and iteration
- Natural language structuring
- Critical reflection on communication styles

Key Takeaways

- Prompt engineering is about asking the right questions in the right way.
- Language precision directly affects the relevance and accuracy of AI responses.
- You don't need to be a programmer to speak to AI—you just need clarity of intent.
- Iteration and experimentation are core to mastering prompting.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 3: FROM ZERO-SHOT TO CHAIN-OF-THOUGHT – PROMPT PATTERNS AND LOGIC

Objectives

- Introduce different prompting strategies used to guide model reasoning.
- Teach how to decompose complex tasks for better AI interaction.
- Distinguish between zero-shot, few-shot, and chain-of-thought prompting.
- Practice structuring prompts that require logic and multi-step thinking.

Learning Outcomes

Learners will be able to:

- Select and apply appropriate prompting strategies for different task types.
- Break down complex queries into clear, processable steps for AI.
- Compare and evaluate outputs from different prompt techniques.
- Analyze the reasoning capacity of AI models through structured tasks.

Subtopics

- Prompting strategies: zero-shot, one-shot, few-shot
- Chain-of-thought prompting for stepwise reasoning
- Task decomposition and scaffolding logic in prompts
- Examples of complex reasoning prompts (math, policy, ethics)
- Prompt failure modes: when and why models make errors

Key Skills Gained

- Prompt design and iteration
- Natural language structuring
- Critical reflection on communication styles

Key Takeaways

- Prompts can “nudge” the AI into reasoning like a human, with the right structure.
- Chain-of-thought prompting improves performance on analytical tasks.
- AI’s “thinking” is statistical, not cognitive—it needs cues to organize steps.
- Effective prompting is like scaffolding: build the reasoning path in your words.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 4: PROMPTING FOR CREATIVITY VS PROMPTING FOR PRECISION

Objectives

- Teach students to balance divergent (creative) and convergent (analytical) prompting.
- Explore how tone, ambiguity, and constraint affect generative output.
- Guide experimentation with prompts for writing, art, and problem solving.
- Compare creative ideation with factual and logical querying.

Learning Outcomes

Students will be able to:

- Craft prompts that encourage creativity, storytelling, and idea generation.
- Modify prompts to constrain and refine outputs when accuracy is required.
- Adjust the temperature and style of generative models using tone and framing.
- Identify when to use open-ended vs. directed prompts.

Subtopics

- Creative prompting: story generation, metaphors, brainstorming
- Precision prompting: summarization, classification, documentation
- Controlling tone, voice, and scope in prompts
- Tools and techniques: randomization, prompt chaining
- Use cases in writing, education, design, and ideation

Key Skills Gained

- Creative thinking with AI
- Language modulation for task type
- Design thinking applied to prompts

Key Takeaways

- AI can be both a creative partner and a fact-finder—it depends on your prompt.
- Creative prompts encourage divergence; factual prompts require tight focus.
- Prompting is like tuning an instrument: tone, tempo, and range matter.
- You can design prompts for emotion, metaphor, or precision—each is a skill.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 5: AI ETHICS AND DIGITAL AGENCY – HOW TO BE A RESPONSIBLE PROMPTER

Objectives

- Engage students in ethical reflection about AI use and misuse.
- Introduce concepts of data bias, model hallucination, and misinformation.
- Discuss accountability, transparency, and authorship in AI output.
- Build habits of ethical prompting and digital citizenship.

Learning Outcomes

Students will be able to:

- Identify ethical concerns in AI output and usage.
- Analyze bias and fairness in datasets and model behaviour.
- Practice transparency in citing and refining AI-assisted work.
- Advocate for responsible AI use in academic and professional contexts.

Subtopics

- AI hallucination, misinformation, and overconfidence
- Data bias, systemic inequity, and exclusion in AI models
- Authorship, plagiarism, and academic honesty in prompt use
- Transparent prompting and source acknowledgment
- Designing AI use policies for schools or workplaces

Key Skills Gained

- Ethical reasoning
- Digital responsibility
- AI audit and critique

Key Takeaways

- AI is trained on biased data; we must approach it critically.
- Prompts are not neutral—they reflect values, assumptions, and intent.
- Ethical prompting includes transparency, clarity, and respect for others work.
- Responsibility for AI's actions ultimately falls on the human user.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 6: COLLABORATIVE INTELLIGENCE – WHEN AI BECOMES YOUR PARTNER

Objectives

- Explore how humans and AI collaborate across domains.
- Teach techniques for iterative prompting and feedback loops.
- Promote AI-augmented productivity and co-creation.
- Design workflows that blend human judgment with AI output.

Learning Outcomes

Students will be able to:

- Use AI tools in iterative cycles of revision and review.
- Design tasks that combine human strengths (intuition, ethics) with AI speed.
- Reflect on AI's role as a thought partner, not a replacement.
- Build simple AI-augmented workflows for writing, planning, or decision- making.

Subtopics

- Human-AI collaboration models
- Feedback loops and iterative prompting
- Using AI for brainstorming, outlining, drafting, and reviewing
- Productivity with AI: planning, scheduling, ideation
- When to trust AI—and when to override it

Key Skills Gained

- Iterative thinking
- Collaboration design
- Human-centered AI integration

Key Takeaways

- AI is a partner in the process, not just a tool for output.
- Co-creation with AI involves iteration, oversight, and reflection.
- Human judgment is essential to meaning-making in AI workflows.
- Effective use of AI requires knowing what it can't do—and filling the gap.

COURSE MODULES & STRUCTURE

EACH MODULE INCLUDES BOTH CONCEPTUAL LEARNING
AND HANDS-ON LAB COMPONENTS.

MODULE 7: CAPSTONE PROJECT – SOLVE A REAL-WORLD PROBLEM WITH PROMPTS

Objectives

- Apply all learned prompt engineering strategies in a real-world scenario.
- Work independently or in teams to design, test, and refine prompt workflows.
- Analyze AI responses, iterate based on feedback, and document process and impact.
- Reflect on ethical, practical, and creative dimensions of AI use.

Learning Outcomes

Students will be able to:

- Define a real-world problem suitable for prompt-based intervention.
- Design multi-step prompt strategies using various techniques.
- Test and refine AI output through critical evaluation.
- Present findings, process, and ethical reflections.

Subtopics

- Capstone design and scope definition
- Project planning and prompt architecture
- Documentation of iterations and decisions
- Evaluation criteria: relevance, clarity, ethics, originality
- Presentation and peer feedback

Key Skills Gained

- Applied prompt engineering
- Critical evaluation of AI use
- Project-based collaboration

Key Takeaways

- Prompt engineering is a skill best learned through doing.
- AI tools can be part of real-world problem-solving across domains.
- Reflection and revision are central to responsible AI practice.

KEY HIGHLIGHTS

- **Earn Your IBM Certificate:** Gain a powerful, industry-recognized credential to validate your skills and advance your career.
- **Flexible Learning That Fits Your Life:** Attend live online sessions designed for busy professionals, allowing you to learn without pausing your career.
- **No Coding Required:** Master powerful AI tools using only plain language. This course is built for all backgrounds, making advanced tech accessible to everyone.
- **A Practical, Job-Ready Curriculum:** Learn core AI concepts and advanced prompting techniques that you can apply at work immediately for better results.
- **Hands-On, Practical Learning:** Move beyond theory with weekly labs and interactive workshops that build real-world, applicable skills.
- **Build Your Portfolio with a Capstone Project:** Solve a real-world problem using AI and finish the course with a tangible project that showcases your expertise to employers.

CAREER SUPPORT & PLACEMENT ASSISTANCE

- **Resume & Profile Coaching:** Resume Building and LinkedIn profile optimization.
- **Placement assistance** is provided through the IBM Learn Platform. Learners can apply for job opportunities directly via the platform

WHY IBM?

TEACHING METHODS

To ensure accessibility for both technical and non-technical learners, this course uses a **blended pedagogical approach** emphasizing engagement, reflection, and application:

1. Experiential Learning (Kolb's Cycle)

- Hands-on labs and exercises where students generate, test, and revise prompts.
- Learners engage in concrete experience, followed by reflection and concept application.

2. Socratic Dialogue & Guided Discovery

- Facilitated discussions on ethics, bias, and design trade-offs.
- Students unpack the “why” behind AI behavior, encouraging metacognition and ethical reflection.

3. Scaffolded Prompt Practice

- From basic prompting to advanced strategies like chain-of-thought.
- Vygotsky's Zone of Proximal Development (ZPD) guides gradual skill- building with peer and instructor support.

4. Collaborative Workshops

- Small-group activities where learners co-design prompts for shared challenges.
- Encourages social construction of knowledge (Bruner, Vygotsky).

5. Real-World Case Analysis

- Study of prompt-driven tasks in education, marketing, design, and social science.
- Connects classroom learning to professional applications.

6. Reflective Journals

- Students maintain a digital “Prompt Logbook” to record AI interactions, decisions, failures, and revisions.
- Promotes reflective practice (Dewey).

Assessment focuses on **skills-in-use**, creativity, ethical thinking, and reflective practice—not rote learning or technical detail.

1. Prompting Lab Exercises (30%)

- Weekly or bi-weekly hands-on exercises (e.g., write a prompt to summarize a policy brief, draft an email campaign using AI).
- Assessed for clarity, originality, and iteration quality.

2. Reflection Journals / Prompt Logs (15%)

- Students reflect on how they designed, tested, and improved their prompts.
- Focus on learning from failure, recognizing model limits, and documenting iteration.

3. Peer Review & Prompt Swap (10%)

- Students critique each others prompt designs and provide feedback.
- Encourages dialogue, clarity, and audience awareness.

4. Ethics Position Paper or Debate (15%)

- Choose a real ethical issue (e.g., AI-generated academic work, AI in hiring) and write or debate a stance.
- Evaluated for argumentation, awareness of perspectives, and ethical reasoning.

5. Capstone Project (30%)

- End-of-course project where students choose a domain (e.g., education, business, design, social good) and solve a real-world problem using prompt engineering.
- Graded on design quality, process documentation, creativity, ethical engagement, and final product relevance.

Assessment STRATEGIES

80 YEARS OF RELATIONSHIP OF IBM WITH ACADEMIA

GLOBAL UNIVERSITY PROGRAMS

OUR PARTNERS

TOTAL DISRUPTION

Over the next 10 years, the adaptation of automation technologies and AI will affect 1.2 billion employees worldwide. This is equal to 50% of the world economy and will disrupt US\$14.6 trillion in wages.

IN THE NEXT 10 YEARS, 50% OF JOBS WILL BE CHANGED BY AUTOMATION.

- 9 out of 10 jobs will require digital skills.
- Young, low-skilled, and vulnerable people - all need help with upskilling.
- As per a report, 14% of the global workforce (375 million people) may need to change their careers by 2030.
- As per an extensive new Korn Ferry report finding that by 2030, more than 85 million Jobs could go unfilled because there are not enough skilled people to take them.

Between 400 million and 800 million individuals could be displaced by automation and need to find new jobs by 2030. Of the total displaced, 75 million to 375 million may need to switch occupational categories and learn new skills

Demand for STEM jobs is anticipated to rise by 23 percent by 2030.

MEET OUR FACULTY

Viveka S is a seasoned AI and Machine Learning professional with over 17 years of extensive experience in software development, data analytics, and technical mentorship. Holding a Master of Engineering in Computer Science, she combines a strong academic foundation with a proven track record of developing and implementing cutting-edge, data-driven solutions for real-world business challenges.

Throughout her career, Viveka has progressed from a hands-on developer to a consultant and manager, leading teams in delivering impactful projects. She has direct, practical experience building predictive models for customer churn and real-time fraud detection systems using modern technologies like Python, Scikit-learn, XGBoost, and PySpark.

Her recent role as a Learner Success Manager highlights her passion and skill for education. She excels at mentoring aspiring professionals, guiding them through complex projects, facilitating Q&A sessions, and clarifying core AI/ML concepts. Viveka's unique blend of deep technical expertise and a genuine commitment to mentorship makes her an invaluable guide for anyone looking to build a successful career in Artificial Intelligence.

VIVEKA S

AI AND MACHINE LEARNING PROFESSIONAL

DR. KAVITHA V

Academic and an Accomplished AI/ML Trainer

Dr. Kavitha V is a distinguished academic and an accomplished AI/ML Trainer with a Ph.D. in Information and Communication Engineering, specializing in Data Mining. Her expertise spans critical areas of AI, including Data Mining, Information Visualization, Image Processing, and Graph Theory.

As an active Freelancer AI/ML Trainer since 2018, Dr. Kavitha has designed and launched joint courses with overseas professors, guided Ph.D. scholars in Machine Learning, and led high-value, funded research projects. Her notable work includes a Rs. 17.8 Lakh project for DRDO on real-time object detection. She possesses extensive international research collaborations with experts in Canada, the USA, Russia, and Australia. A testament to her deep academic connections in computer science, she holds an Erdos number of 4.

Her commitment to fostering innovation is evident through her roles as a mentor at the Innovation Incubation Centre and her initiative in establishing the MITACS internship program for students. Dr. Kavitha's blend of profound theoretical knowledge and practical, real-world application makes her an invaluable expert in the field of AI and Machine Learning.

FREQUENTLY ASKED QUESTIONS

Who should enroll in this program?

This program is ideal for professionals, educators, and learners from any background who want to master AI tools for productivity and innovation, without needing to code.

What is the mode and duration of the program?

The program consists of live online classes held on weekends (Saturdays & Sundays) for 3-4 months.

Is there any hands-on component or project?

Yes. The curriculum is highly practical, featuring weekly hands-on labs and culminating in a real-world Capstone Project to build your professional portfolio.

Are there any prerequisites for enrolling in the program?

You need a Graduation or Diploma from a recognized institution. No coding or prior technical expertise is required.

What certificate will I earn upon completion?

You will earn an official **IBM Certificate in AI/ML with Prompt Engineering**. To qualify, you must complete all course assessments, including the final Capstone Project. The digital certificate will be awarded upon successful completion.
